Summary

Software Engineer with 5+ years of experience building scalable, enterprise level web applications with a focus on the research, design and implementation of next generation frontend systems built with modern technologies. A self-motivated team player who pays close attention to detail and works collaboratively across geographically distributed teams to deliver high quality software in an agile, fast-paced environment.

Experience

Gogotech, New York, NY - Software Engineer

August 2017 - October 2022

- Designed, implemented and launched core features for high traffic web applications while providing code reviews, mentoring, QA testing and deployment support across transnational teams
- Built backend RESTful API services with C# and .Net Core, utilizing various design patterns and techniques
- Performed critical frontend optimizations for proprietary single-page applications through bug fixes and refactorings in addition to file compression, CDN usage and caching
- Developed automated testing suite for our client-side application using the Selenium framework, ultimately improving team productivity through the reduction of newly reported bugs

Focus Camera, Brooklyn, NY - Ecommerce Manager

January 2014 - August 2017

- Produced and managed online content for various e-commerce platforms by providing HTML and CSS support
- Collaborated closely with software developers and designers to curate and deliver quality experiences for end-users
- Analyzed sales data and related metrics to assist in the development of marketing campaign strategies

G2G Consulting, Washington D.C. - Government Affairs Mediator

July 2012 - October 2013

- Authored governmental policy research for senior legislative personnel and published reports on analytical insights
- Coordinated meetings with congressional officials and contributed valuable dialog on behalf of several public entities
- Provided client management services in addition to technical support and other office related duties
